LIST OF CONTENTS

VOLUME 45

NUMBER 1

- | | | |
|--|------------|--|
| R. G. McGarvey and T. M. Cavalier | 1 | A global optimal approach to facility location in the presence of forbidden regions |
| M. Ghiassi and C. Spera | 17 | Defining the Internet-based supply chain system for mass customized markets |
| J.-F. Chen | 43 | Component allocation in multi-echelon assembly systems with linked substitutes |
| C. S. Lee, S. S. Kim and J. S. Choi | 61 | Operation sequence and tool selection in flexible manufacturing systems under dynamic tool allocation |
| M. Aldaihani and M. M. Dessouky | 75 | Hybrid scheduling methods for paratransit operations |
| Y. Orito, H. Yamamoto and G. Yamazaki | 97 | Index fund selections with genetic algorithms and heuristic classifications |
| J. Zhou and B. Liu | 111 | New stochastic models for capacitated location-allocation problem |
| B.-S. Min and D.-W. Tcha | 127 | On stacking bi-directional self-healing-rings on a conduit ring |
| Y. J. Son, A. T. Jones and R. A. Wysk | 141 | Component based simulation modeling from neutral component libraries |
| D. L. Shunk, J.-I. Kim and H. Y. Nam | 167 | The application of an integrated enterprise modeling methodology — FIDO — to supply chain integration modeling |
| J. C.-Y. Su, S.-J. (G.) Chen and L. Lin | 195 | A structured approach to measuring functional dependency and sequencing of coupled tasks in engineering design |
| A. Lengyel, I. Hatono and K. Ueda | 215 | Scheduling for on-time completion in job shops using feasibility function |
| M. D. Rossetti and K. J. A. Stanford | 231 | Group sequencing a PCB assembly system via an expected sequence dependent setup heuristic |

NUMBER 2

- | | | |
|-------------------|------------|---------|
| S. M. Waly | 255 | Preface |
|-------------------|------------|---------|

doi: 10.1016/S0360-8352(03)00108-6

- M. Azizoglu, S. Kondakci and M. Köksalan** 257 Single machine scheduling with maximum earliness and number tardy
- S. Myint** 269 A framework of an intelligent quality function deployment (IQFD) for discrete assembly environment
- E. R. Coates and M. E. Kuhl** 285 Using simulation software to solve engineering economy problems
- B. Ghahramani** 295 Software reliability analysis: a systems development model
- P. Cowling** 307 A flexible decision support system for steel hot rolling mill scheduling
- R. Javadpour and G. M. Knapp** 323 A fuzzy neural network approach to machine condition monitoring
- G. A. Süer, R. Vazquez and J. Santos** 331 Evolutionary programming for minimizing the average flow time in the presence of non-zero ready times
- NUMBER 3**
- C. Chiplunkar, S. G. Deshmukh and R. Chattopadhyay** 347 Application of principles of event related open systems to business process reengineering
- F.-Y. Ding and R. Tolani** 375 Production planning to support mixed-model assembly
- R. J. Gagnon and C. Sheu** 393 Acquiring advanced engineering technologies under conditions of performance improvement
- Y.-K. Lin and J. Yuan** 417 Flow reliability of a probabilistic capacitated-flow network in multiple node pairs case
- R. Linn, J.-y. Liu, Y.-w. Wan, C. Zhang and K. G. Murty** 429 Rubber tired gantry crane deployment for container yard operation
- B. Mondal, A. K. Bhunia and M. Maiti** 443 An inventory system of ameliorating items for price dependent demand rate
- J. Shin, S. Park, C. Ju and H. Cho** 457 CORBA-based integration framework for distributed shop floor control
- M. T. Todinov** 475 Minimum failure-free operating intervals associated with random failures of non-repairable components
- I. H. Toroslu** 493 Personnel assignment problem with hierarchical ordering constraints
- C. C. Yang and V. N. A. Naikan** 511 Optimum tolerance design for complex assemblies using hierarchical interval constraint networks
- NUMBER 4**
- A. R. Clark** 545 Hybrid heuristics for planning lot setups and sizes

A. A. Shikdar and N. M. Sawaged	563	Worker productivity, and occupational health and safety issues in selected industries
R. Spina, L. M. Galantucci and M. Dassisti	573	A hybrid approach to the single line scheduling problem with multiple products and sequence-dependent time
J. M. Usher	585	Evaluating the impact of alternative plans on manufacturing performance
B. J. Park, H. R. Choi and H. S. Kim	597	A hybrid genetic algorithm for the job shop scheduling problems
Y.-F. Hung, C.-P. Chen, C.-C. Shih and M.-H. Hung	615	Using tabu search with ranking candidate list to solve production planning problems with setups
I. H. Osman, B. Al-Ayoubi and M. Barake	635	A greedy random adaptive search procedure for the weighted maximal planar graph problem
U. Purintrapiban and V. Kachitvichyanukul	653	Detecting patterns in process data with fractal dimension
S. G. Ponnambalam, P. Aravindan and M. S. Rao	669	Genetic algorithms for sequencing problems in mixed model assembly lines
D. Ridley	691	The univariate moving window spectral method
S. Zolfaghari and M. Liang	713	A new genetic algorithm for the machine/part grouping problem involving processing times and lot sizes
	733	Volume Contents
	737	Author Index
